

## **Applications Scientist**

We are looking for an Applications Scientist to join our commercial team providing pre and post sales technical and application support to our customers. This team is also focused on fostering collaborative relationships with potential Recombinase Polymerase Amplification (RPA) adopters.

Candidates will have experience in a molecular biological discipline and the desire to become an expert in the company's isothermal DNA/RNA amplification and detection technology: RPA. You, working closely with your applications colleagues, will assist customers wishing to use RPA to power laboratory, field and decentralised applications for digital, microfluidics/lab-on-chip, companion diagnostics, agriculture and defence. You can find published examples of customers varied uses of RPA at <http://www.twistdx.co.uk/publications/>

Your daily role will involve fielding technical support queries which could be quick answers to frequently asked questions, through to questions which require more in depth analysis and a lengthier set of communications to answer technically complicated issues. You will utilise the company Customer relationship management system. Experience in a previous customer facing role would be of value.

To apply, please send your CV and covering letter to [janet@twistdx.co.uk](mailto:janet@twistdx.co.uk) quoting reference BBTAS10102017.
