

PhoreMost® is searching for a Hit Validation Scientist to join our team!

Who we are:

We are a new Biotech Start-up located in Cambridge, UK that seeks to open up new 'druggable' target space using a cutting-edge approach called *Protein Interference*®, which has the ability to identify hidden, or cryptic, drug sites in disease-relevant proteins, and then target those sites with first-in-class small molecule therapeutics.

To help us achieve this goal, we are seeking a resourceful Hit Validation Scientist who wants to contribute to and shape the future of translational medicine together with us.

Duties and responsibilities:

- Under supervision of the R&D management team, plan, execute and analyse experiments, and interpret data to validate hits from high-throughput *Protein Interference* screens to uncover and target previously 'undruggable' disease targets.
- Collaborate with other scientists across disciplines, as well as with external academic and industrial partners.
- Keep track of and meet project deadlines and clear documentation of experimental work.

Requirements:

- Team oriented, great communicator, bright and highly motivated.
- Strong problem solving and analytical skills. Lateral thinker.
- Positive "can-do" attitude, eager to learn and grow with the company.
- Able to work independently, in an organised fashion and according to standard operating principles and health and safety guidelines.
- Hands-on experience in common molecular biology and wet-lab techniques (Western blot, microscopy, fluorescence measurement, viability assays, transfections, PCR, Cloning, handling of human cell lines), and the willingness to pick up new skills along the way.
- Experience in lentiviral work, reporter assays, drug discovery and target discovery are a plus.
- A proven track record (3+ years) in industry or strong publication record for academic candidates.
- A solid understanding of molecular biology and high-throughput cell-based screening is desirable.
